## Photos

**SAND + Compost**

**SOIL**

## Difference b/w

### SAND + Compost

**Sand** is a granular material composed of finely divided rock and mineral particles.

**Compost** is a mixture of ingredients used to fertilize and improve the soil. It is commonly prepared by decomposing plant and food waste

**Plants can grow in sand if there is a steady supply of water and nutrients**

### SOIL

**Soil**, also commonly referred to as earth or dirt, is a mixture of organic matter, minerals, gases, liquids, and organisms that together support life.

Thank you
